Summary

AI/ML Software Engineer spanning agentic AI, computer vision, and full-stack engineering, building both the models and the products around them. Currently launching an open-source platform for training, deploying, and sharing digital pathology models and pipelines; previously built AML model features, fraud and compliance pipelines, and product-quality systems at a large fintech.

Experience

Epivara, Inc., BioTech — Champaign, IL
AI/ML Software Engineer — *May 2025 – Present*

- Built and pretrained DINOv3 ViT + CNN-adapter model capturing tissue-scale structure down to sub-nuclear detail: +18.5% mSA and +4.6% F1 over a state-of-the-art baseline on Leydig-cell histology; underpinned a toxicology study.
- Engineered a 16× larger field of view at 2× lower inference cost and 3.7× faster training over a state-of-the-art baseline, supplying the anatomical context needed to reject biologically implausible classifications across ∼3/4 of surveyed tissue endpoints.
- Creating a multi-view vision system that combines SAM 3.1, multi-animal 3D pose tracking, and temporal event modeling to automate behavior measurement under severe occlusion.
- Shipped production agentic systems: an LLM tool-calling analysis platform that explores schemas, writes SQL, and runs sandboxed Python, plus a human-in-the-loop ingestion agent that reduced experimental-data insertion from hours to minutes.

Tinkoff, FinTech — Moscow, Russia
Data Analyst (Compliance) — *Feb 2022 – Oct 2022*

- Contributed to feature development for a new Anti-Money Laundering model. The model increased fully automated case resolution from 45% to 60% and cut annual costs by $1.7M.
- Developed SQL/Python/Spark pipelines and dashboards that improved fraud and compliance analysis, cutting 1,000 hours of manual work annually.

Tinkoff, FinTech — Moscow, Russia
Data Analyst (Insurance) — *Mar 2021 – Feb 2022*

- Engineered a real-time quality measurement framework that merged backend logs, frontend events, and database tables, exposing live SRE metrics in Grafana and raising product quality (aggregated metric) by 18% while saving $60K monthly.
- Delivered ML-ready datasets for churn prediction, ran A/B tests, and worked with product and engineering teams to diagnose production issues.

Projects

HistoForge: Open-Source AI Platform for Digital Pathology (Launching Aug 2026) — [Link]

- Building an end-to-end platform (QuPath Java plugin + Modal GPU inference runtime + Hugging Face model hub + pip package) that brings foundation-model tissue analysis to pathologists and researchers.
- Pretrained a large field-of-view DINOv3 + CNN-adapter model on 16 public cell-segmentation datasets; shipping 25 nuclei- and structure-level modules trained on public and proprietary data.
- Packaging training and inference so labs can fine-tune, run, and share their own models and pipelines, targeting reproducible quantitative pathology for oncology and toxicology research.

Entropy-aware sampling in vLLM — [Link]

- Implemented entropy-aware token sampling in vLLM with GPU-batched lookahead to control diversity by penalizing entropy-reducing tokens in speculative decoding.

Education

University of Illinois Urbana–Champaign — Champaign, IL
Master of Computer Science | GPA 3.8 / 4 | Graduate Research Assistant — Aug 2024 – May 2026

Bauman Moscow State Technical University — Moscow, Russia
Specialist in Autonomous Informational and Control Systems | GPA 4.7 / 5 — Sep 2016 – Jun 2022

Skills

Languages: Python (FastAPI, SQLAlchemy, asyncio), SQL, TypeScript (React, Zustand, shadcn/ui), Java, C++, MATLAB
AI/ML: PyTorch, LangGraph, vLLM, Scikit-learn, W&B, tool and agent orchestration, HITL, RAG
Infra/Data: AWS (EC2, S3, IAM, ECS, VPC), Modal, Docker, PySpark, PostgreSQL, HPC (SLURM)
